Title: Image-to-Text Bilingual Dataset from Medical Prescriptions

Abstract:

The dataset consists of 600 handwritten medical prescription images with annotated bilingual (Bangla & English) text contents. It is appropriate for OCR, NLP, machine translation and AI health assistant research.

Dataset Overview:

- **Images:** 600 (.jpg)
- **Annotations:** annotations.csv with columns:
  - image_filename — Image file name
  - description_bangla — Bangla text
  - description_english — English transcription
- **Text fields:** May contain multiple lines

Data Collection:

Images were gathered; with high resolution, from the hospitals and clinic's and pharmacy in Gazipur, Bangladesh. Only unambiguous and full prescriptions were included, personal identifiers having been redacted.

Applications:

Medical document comprehension, handwriting recognition for out of vocabulary words, bilingual NLP tasks, machine translation and AI in medicine.

File Structure:

- Prescription Dataset.csv — Image names and bilingual captions
- Prescription images — Prescription images

Usage:

For research and educational purposes.
